The LAM-502 comes equipped with its own sheet jogger

SBC brings Laminator machines to the UK

By Pamela Mardle Wednesday, 18 July 2012

Spiral Binding Company (SBC) has added the LAM-50 CA and LAM-502 laminators to its portfolio.

Be the first to comment

The two machines, launched at Drupa 2013 are to be distributed exclusively in the UK through finishing supplier SBC.

Both machines have a maximum sheet size of 52x72cm and the LAM-50 CA is available as a semiautomatic or fully automatic feed machine.

The LAM-50 CA offers speeds up to 10m/min and can run a SR3 printed sheet on the long or short edge.

SBC's Keith Shone said: "The LAM-50 CA is ideal for both litho and digital printing companies that need their own in-house lamination facility with a compact footprint."

The LAM-502 is suitable for the B2 offset litho printer, boasting production speeds of 30m/min. Both laminators come with an adjustable de-curling device suitable for feeding digital work into the laminator and incorporate an offset-style paper feeder.

Each system features chrome-plated laminating rollers with pneumatic pressure – 120mm in the LAM-50

CA and 230mm for the LAM-502 – to produce high quality results for digital print work.

Shone said: "SBC has many years' experience in the print industry and understands its needs. Looking at the specifications of the machines, these are exciting new products to add to our portfolio and we look to establishing them in the UK "
